Bath Care Instructions

Purestone is a solid, non-porous and homogenous material which has excellent properties, such as, non-staining, heat & fire resistant, yellowing resistant, anti-bacterial and non corrosive. It is also a strong material of high density that is excellent in withstanding impact.

GENERAL CLEANING

Cleaning and routine care is simple through the use of warm water and a mild detergent or any ammonia-based cleaner. Alternatively, any commercially available solid surface and marble cleaning solution may be used. Use only a soft damp cloth or cellulose sponge for cleaning. Prolonged routine cleaning over a period of time may brighten up the surface, to regain the matte appearance gentle circular-motion dry polishing by hand using 600-grit sandpaper (supplied with your bath) will recreate the matte appearance.

BASIC MAINTENANCE AND REFURBISHMENT

Similar to the characteristic or natural stone, long term exposure to elements as well as normal wear & tear may dull the surface. Contact of spills, such as, tea, coffee, wine and other coloured non-corrosive liquid over an extended period of time may impregnate the stone surface and cause mild staining. However, the above scenarios can easily be removed and refurbished by gentle hand polishing using 600-grit sandpaper dry polishing for matte surfaced and 2000-grit or up to 5000-grit sandpaper wet polishing for gloss finished surfaces.

CAPABILITIES

Durable and Tough
Easy Maintenance
Solid, non-porous, homogenous
Non-toxic and environmentally friendly
Inside out consistent, and can be polished and refurbished
Does not crack, does not yellow
Suitable for Both Indoor and Outdoor Uses
